Drilling into objectives

Reactive

1

Mitigation of risk

through recognizing and closing our gaps and vulnerabilities

2

Making our findings explainable

leveraging interpretability and inter-contextuality to build actionable, operationalizable narratives

Transition

3

Consistently improving

optimizing, iterating, and innovating... understanding the results of our checks, what they mean, and how we can improve them

Proactive

4

Horizon scanning

creating and leveraging our new feedback loops to help us observe trends, recognize emerging threats, and respond to them

Journal Policies

Increased screening for Research Integrity issues may require journal policy updates and adjustments to author guidelines. It is important to think ahead about how any Research Integrity issues will be escalated and managed.

Do

- Audit to ensure consistency across your portfolio
- Stay up to date on COPE and other industry standard guidelines
- Think carefully about author communication

Don't

- Wait until you find a problem with a manuscript to change your policy
- Assume authors know what you mean
- Neglect examining practice to ensure it aligns with policy

Standardization

A standardized set of system configurations and processes:

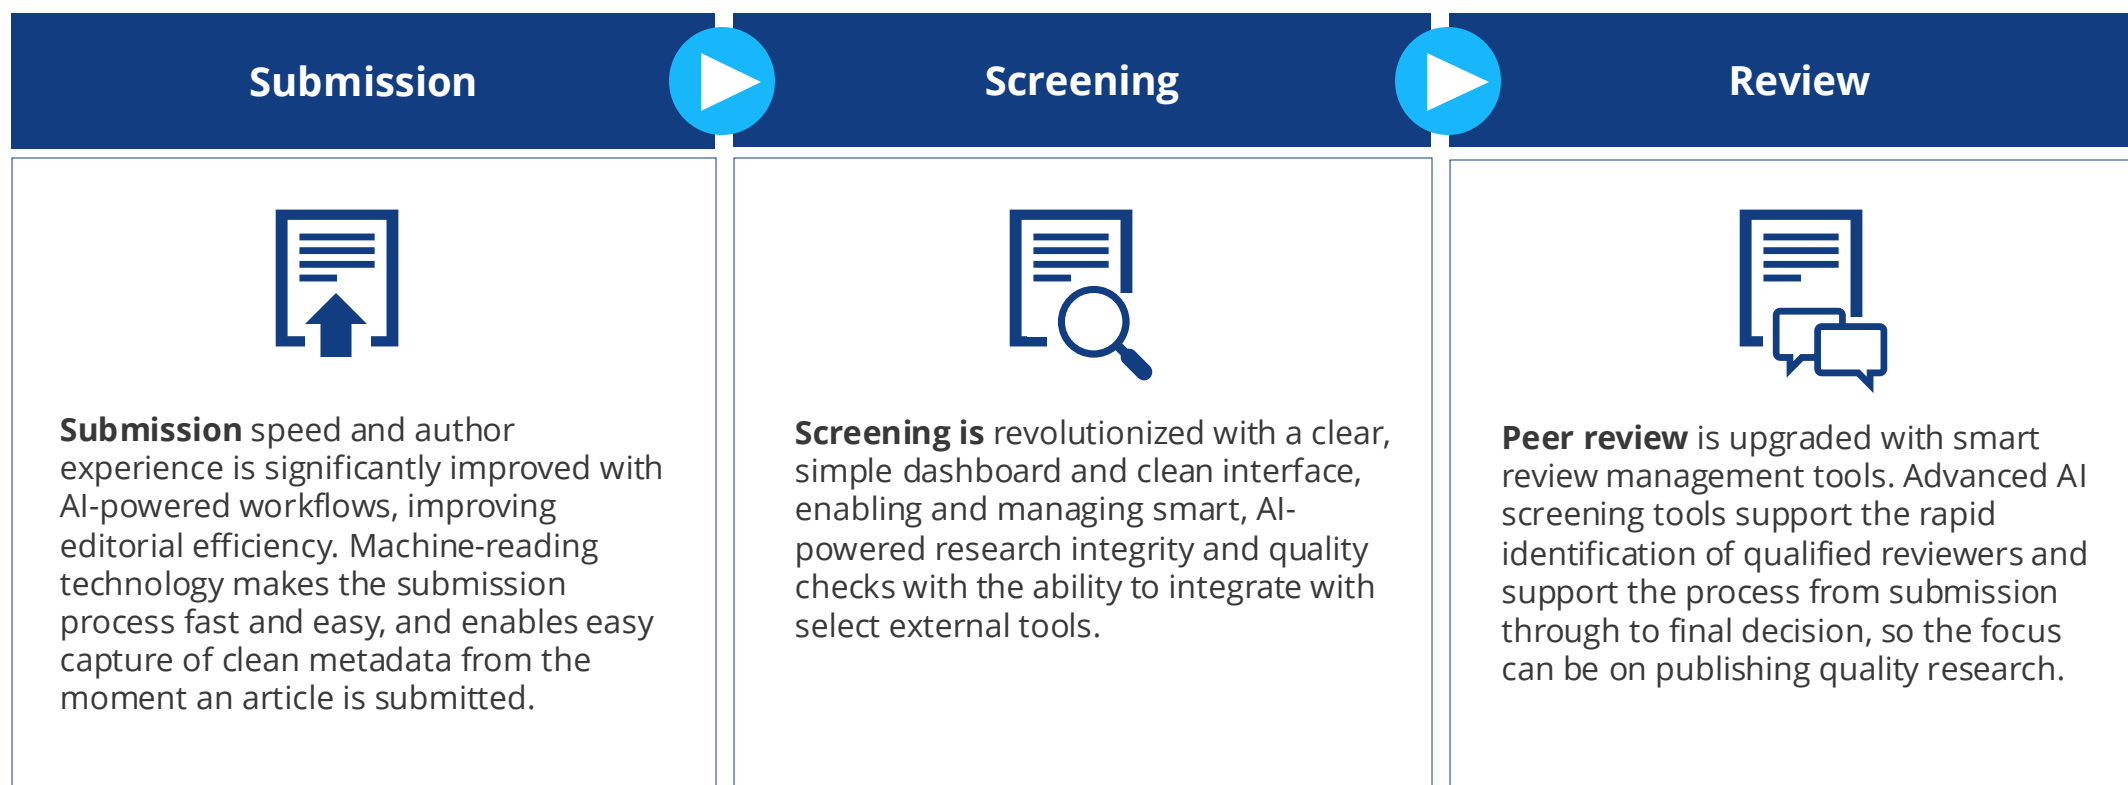

- Allows staff, Editors, and reviewers to easily perform their roles
- Establishes a unified author experience across the portfolio
- Harmonizes article types, decision terms, custom questions, and file designations
- Creates data consistency for analyzing and comparing data across the portfolio
- Optimizes transfers within your portfolio
- Promotes faster, more consistent turnaround times for authors
- Accelerates publishing strategies and innovation
- Facilitates scale at reduced costs

Standardization does not mean a journal or portfolio can have no customizations. However, there must be criteria for approval, an implementation process, and impact analysis before customizations are made at the publishing program level.

What is Research Exchange

Research Exchange is a harmonized submission, screening, and peer review platform that unifies publication workflows, improves the author experience, and gives editorial teams smart tools that allow for greater focus on submission quality and growth.

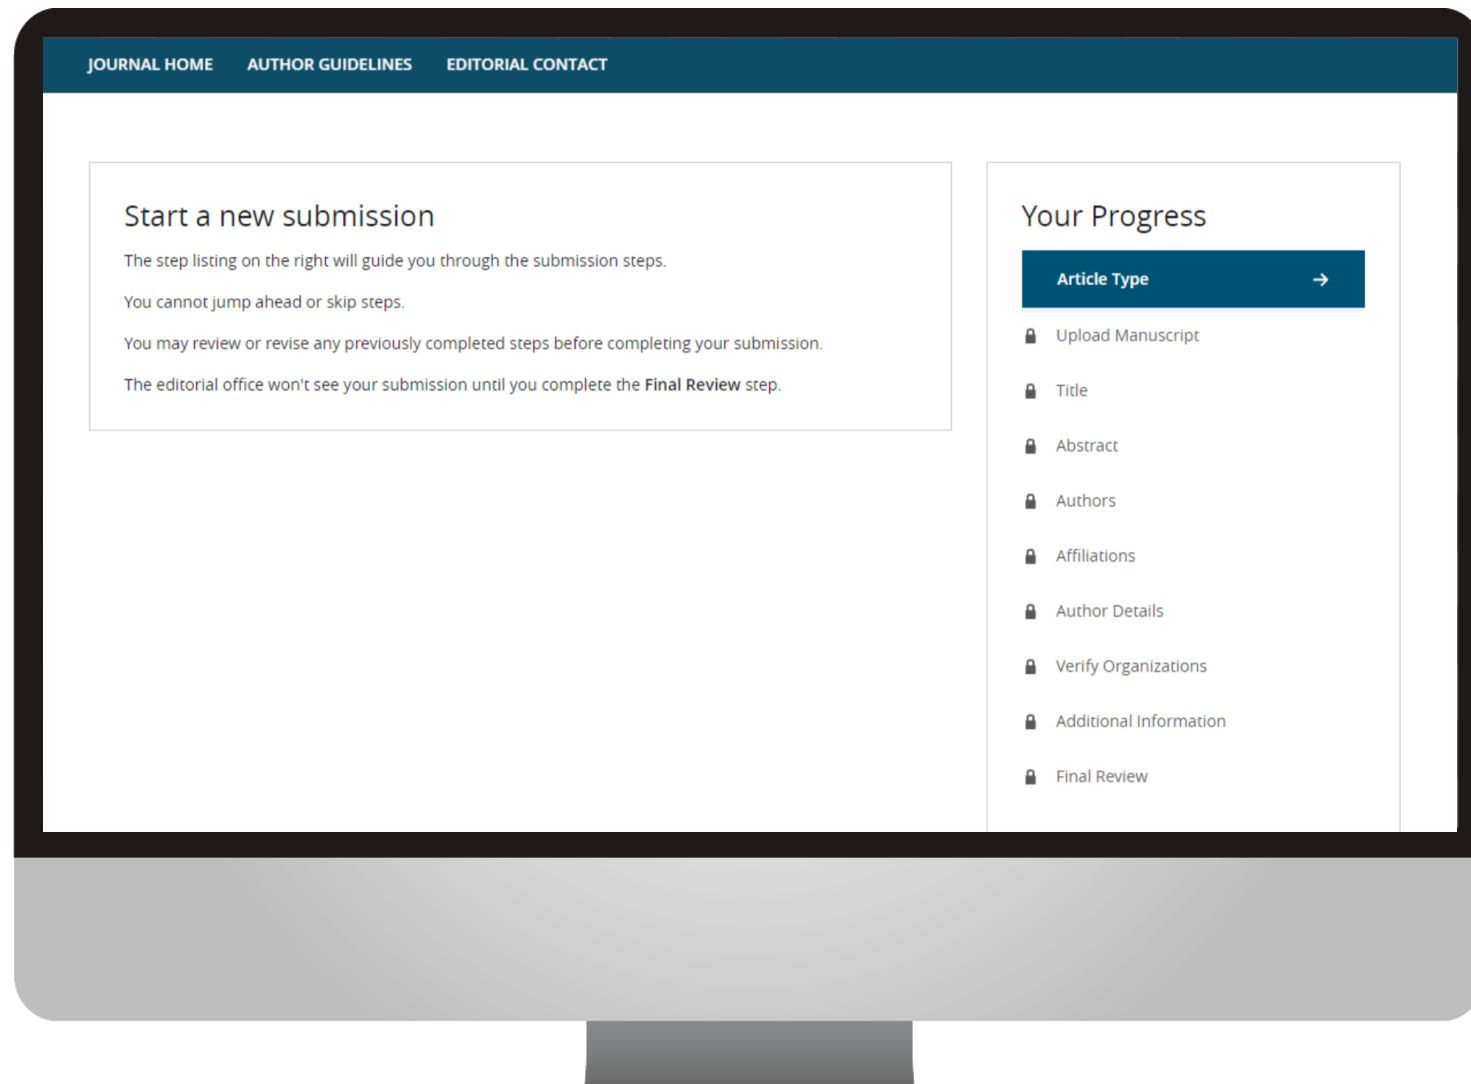

Research Exchange Submission

Best-in-class author experience
leveraging machine-reading to
make submission fast and
efficient.

Research Exchange Submission

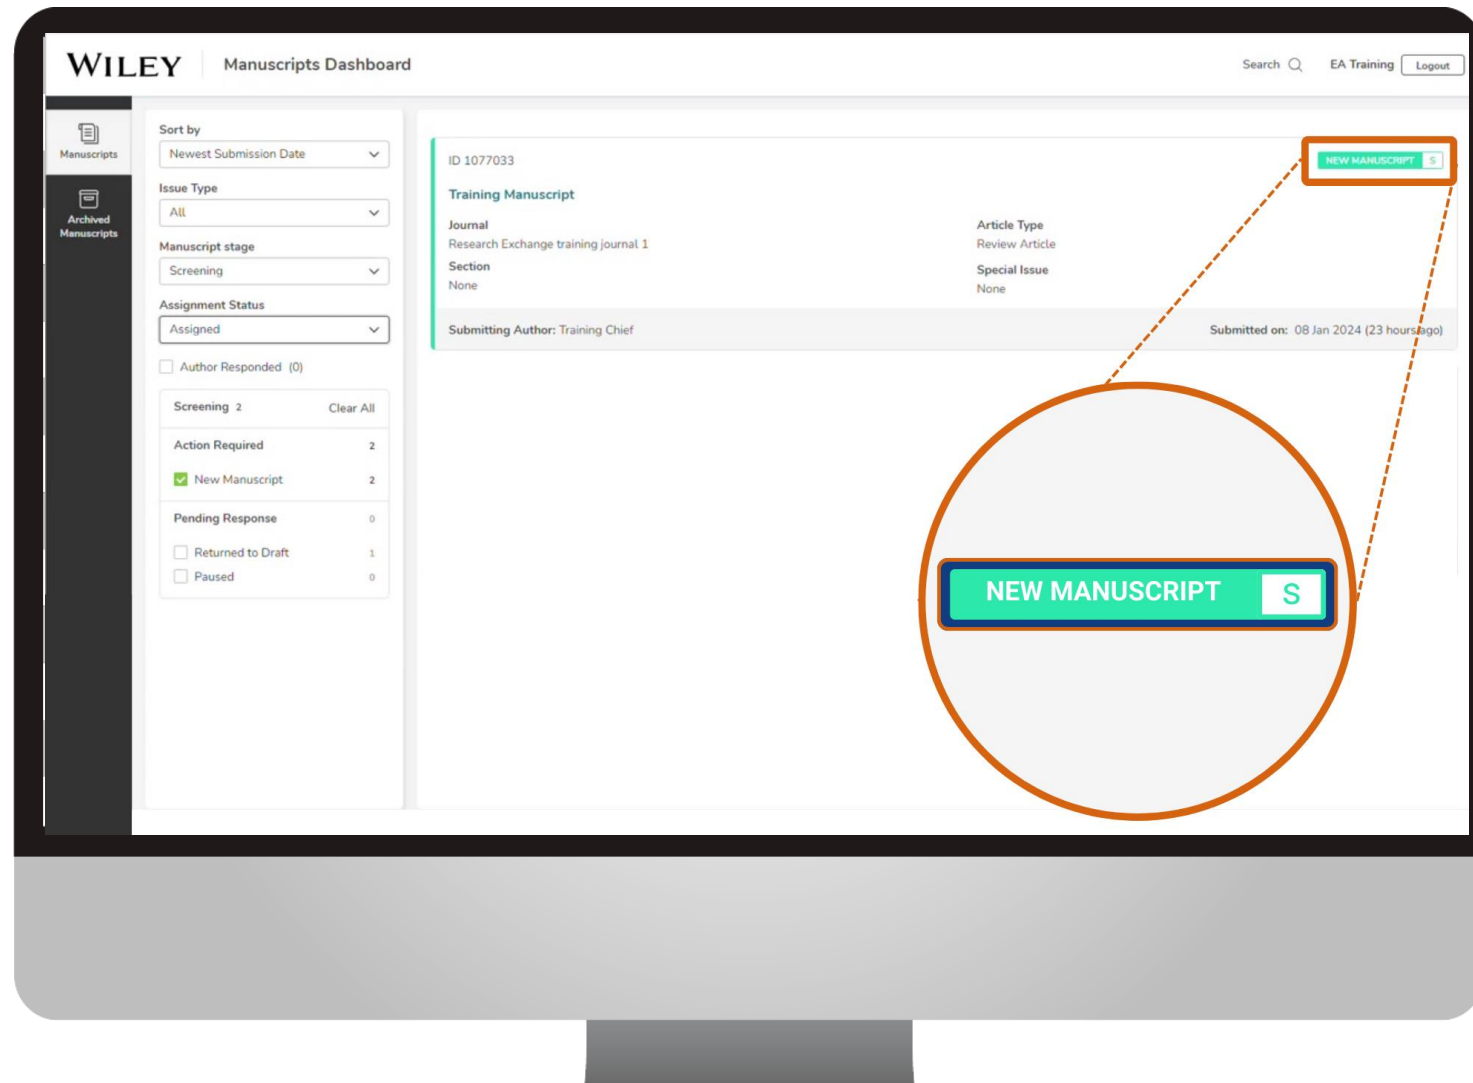

Research Exchange Screening

Dedicated Editorial Staff UI to manage 24+ industry-wide and proprietary quality and integrity checks to weed out suspicious or low-quality content before Editorial review, all in one place.

Research Exchange Screening

Screening

Spot low-quality papers, potential paper mills papers, and machine-generated content before peer review, saving editors time.

Proprietary and industry-standard screening checks, with more in development, including:

- **Info Validation:** Cross-referencing abstract, title, and supporting content to paper content.
- **Author Identity Verification:** Disambiguate author name, ORCID, and affiliation using CONNECT, internal and open-source databases.

Pre-screening Check

Info Validation

Author Identity Verification

Manuscript info

Activity & Message

#1 Author VERIFIED

First Name John

Last Name Deere

Screening

Proprietary and industry-standard screening checks (continued)

- Language & Wordcount
- Suspicious Words database
- iThenticate
- Submission Similarity: Check if paper has been submitted in other journals (integrated with EKG and STM Integrity Hub)
- Machine-Generated Content
- Problematic Phrases
- Scope Match: Is the paper appropriate for this journal?

Pre-screening Check	Info Validation	Author Identity Verification	Manuscript Info	Activity & Messages
+ Language & Wordcount			Word Count 3814 ENGLISH	
+ Suspicious Words				FOUND
+ iThenticate Score				OK
+ Submission Similarity				1 MATCH FOUND
+ Machine-Generated Content Detection				PASSED
+ Problematic Phrases				NONE
+ Scope Match				HIGHLY IN SCOPE
+ Reference Analysis				ISSUES FOUND

Screening

Proprietary and industry-standard screening checks, (continued)

- Reference Assessment (including Crossref, CrossMark, DOI, self-citation, citation stacking, etc.)

— Reference Analysis

References with Issues	Self (Author) Citations	Citations Stacking
Analysed References 14	Linked to Crossref ? 11	Linked to Pubmed ? 9
Number of Preprints 0		

▲ 4 references with issues [+ Show All References](#)

6. Alpha, A., Beta, B., & Delta, D. (2020). Study of xzy in xzy. <https://doi.org/10.1007/12234>

Crossref does not recognize the DOI "10.1007/12234", and reports it is not registered at any other registration agency. Please check the accuracy of the DOI. (Ref. 6 "Alpha, Beta, Delta, 2020")

8. Bravo, B Cross analysis of references at scale. Ann Narrative Studies.

This reference lacks a DOI

11. Graph G, Micro M, Sales S, Chronic recurrent reference issues at scale, Case reports in narrativitus. 2011;2011.

Retraction Watch reports that this item was Retracted on August 28, 2014 because the DOI in the reference matches the Retraction Watch database. Retraction Watch gives the reason as: "Recognised citation manipulation;".

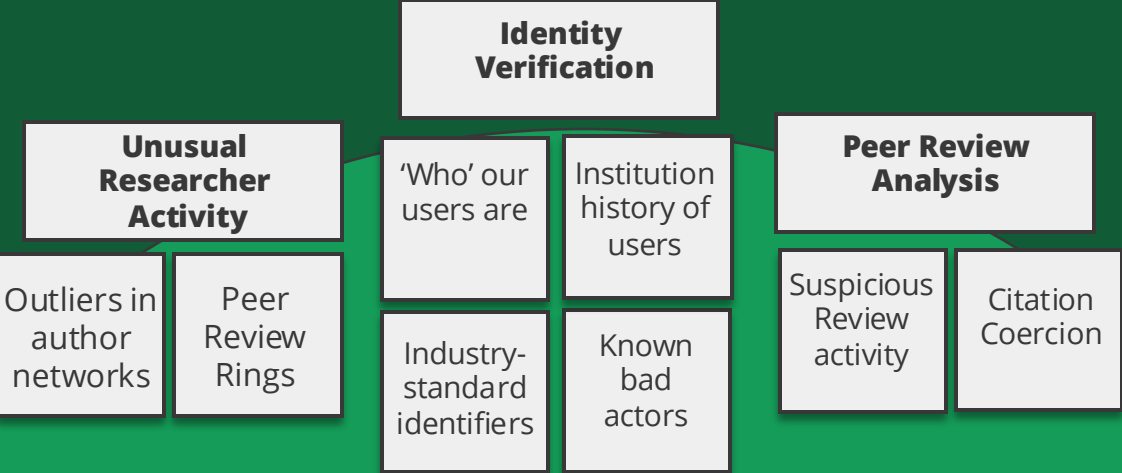

CrossMark reports a retraction (or similarly important issue). The CrossMark type is "retraction". Additional information can be found at <https://doi.org/10.1155/2014/00000000>.

14. Car, C, Bus, B.B & Shuttle, S, (2019). Quality and quantity control of reference analysis over time <https://doi.org/10.0000/52435>

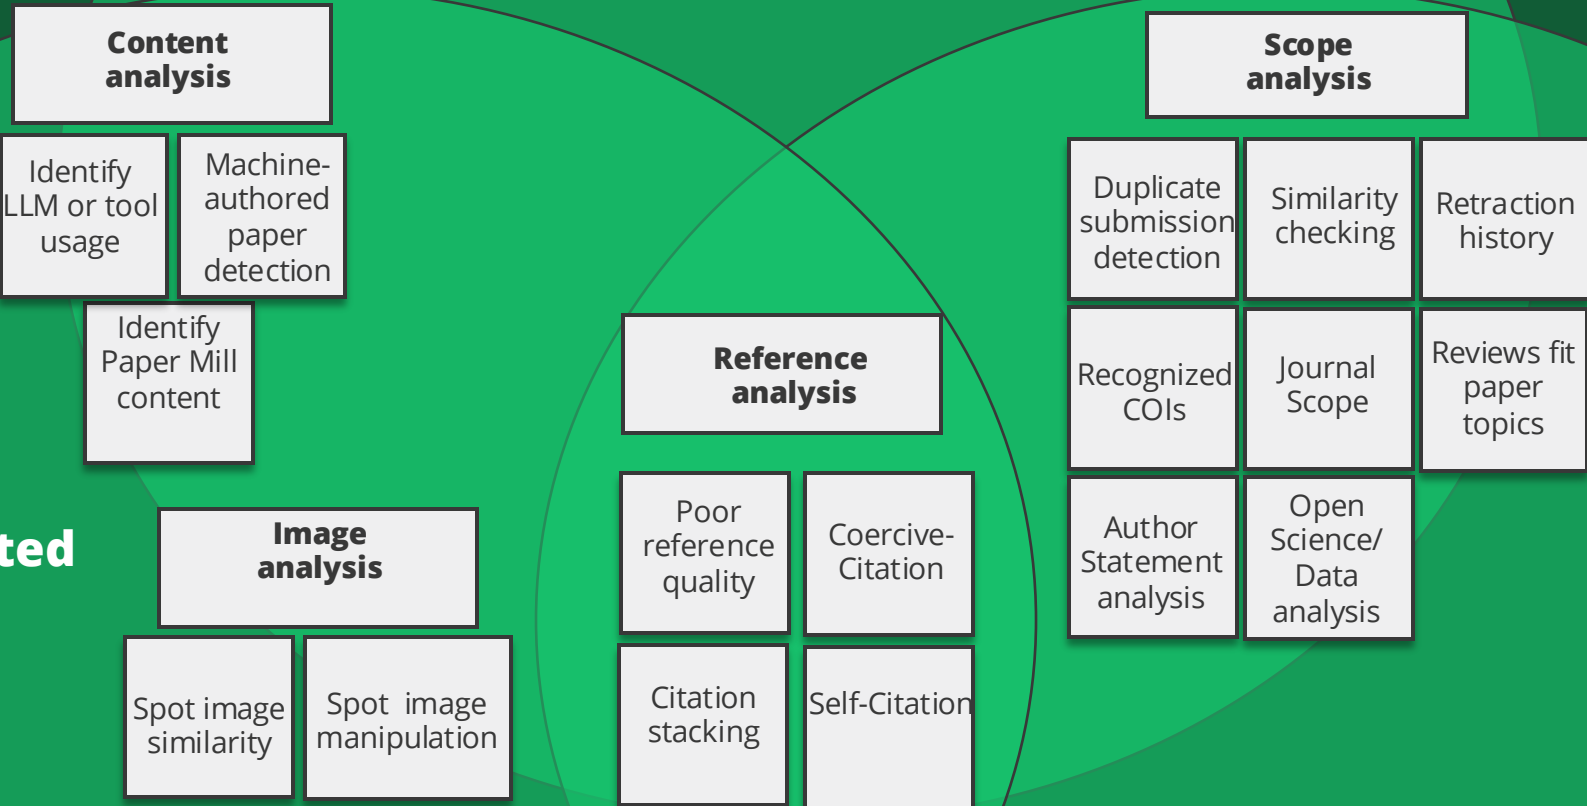

CrossMark reports an erratum (or similar issue). The CrossMark type is "correction". Additional information can be found at <https://doi.org/100000/52435>

Screening

Our tools ask key integrity questions across three areas:

Researcher misconduct, potential paper mills

Machine-generated content

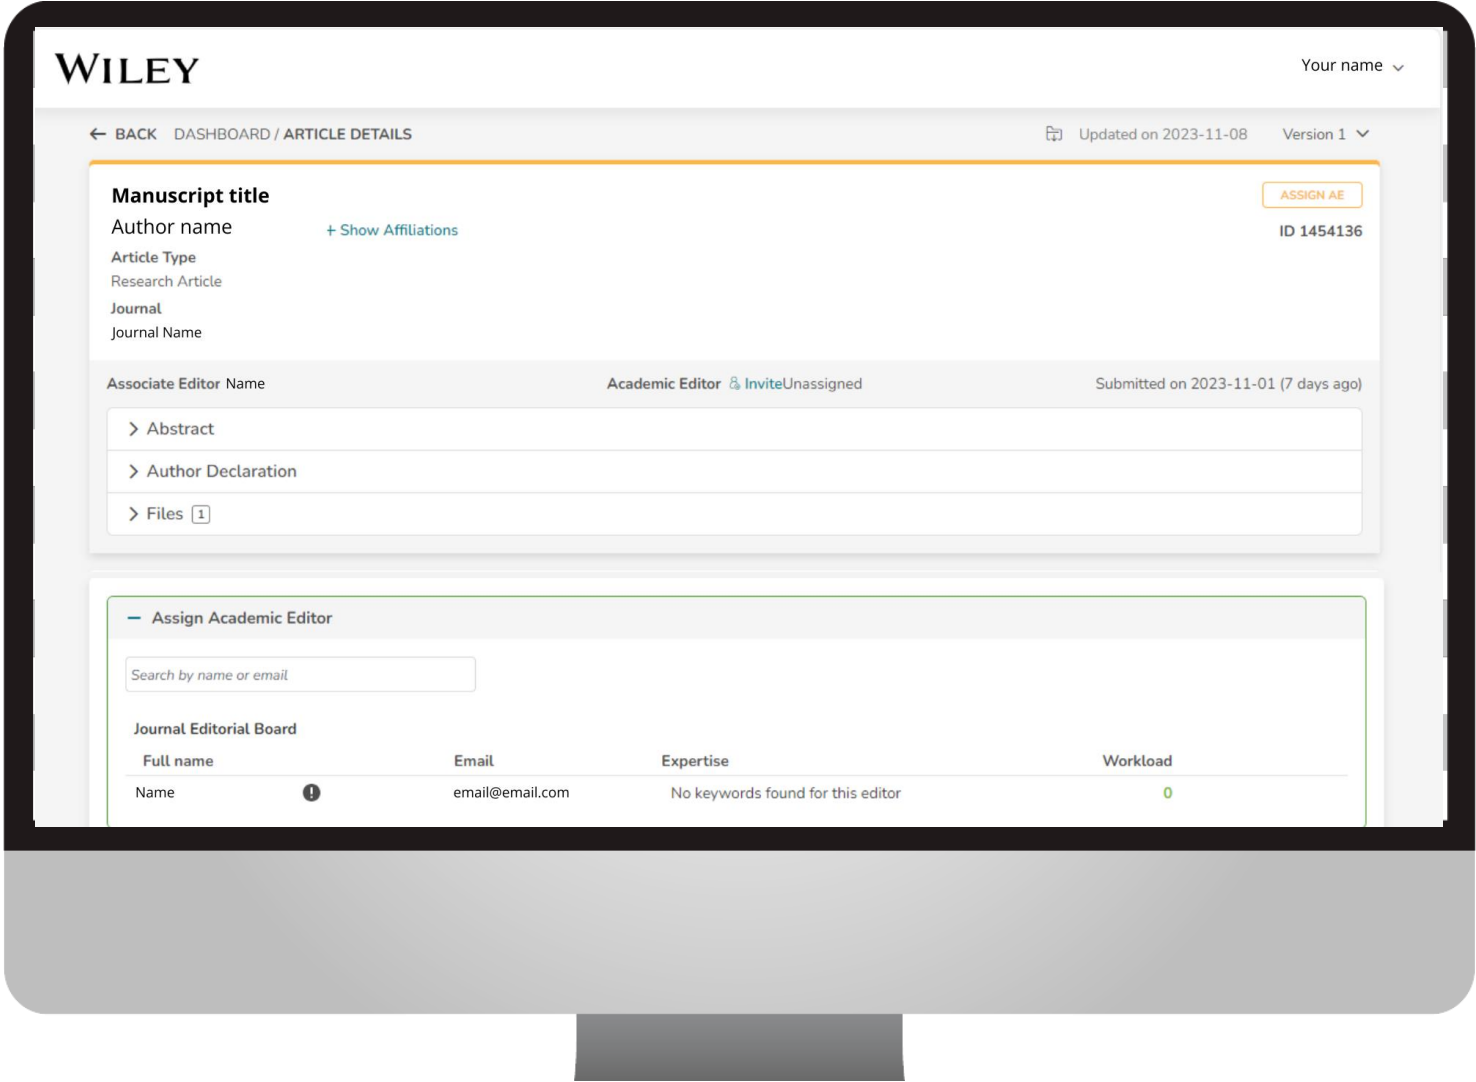

Submission quality

Research Exchange Review

Smart peer review management tools that serve Authors, Editors and Reviewers. The final piece of our streamlined and output-driven system.

Research Exchange Review

Data helps us to build narratives

Bringing multiple data points together cohesively is where we begin to really see value

Tools and AI can help us accelerate this, speeding up the process of identifying patterns and behaviors, helping in distinguishing between standard and potentially problematic activities.

Report date

26 Dec 2023, 16:20

Report

1. The paper is original, it reads well and is of importance to clinicians, patients, teachers and policymakers. Journal of Exposing Narrative is the appropriate place to publish because it can reach each of these target groups. The scientific reliability is further discussed below with reference to the consort statement for reporting of randomised controlled trials. (Improving the quality of reporting of detecting potential problems: JoEx123) I would recommend publication in the JoEXN following revisions by the authors.- [Show Less](#)
